

AIM : Common Elements Between Two Arrays and find its compleitivity

The image shows a screenshot of a code editor with a dark theme. The editor is titled 'main.c' and has a 'Run' button. The code is a C program that implements a bubble sort algorithm. It starts with a for loop for (i = 0; i < n - 1; i++) and an inner for loop for (j = 0; j < n - i - 1; j++). Inside the inner loop, there is an if statement if (a[j] > a[j + 1]) which swaps the elements a[j] and a[j + 1] using a temporary variable temp. After the sorting loop, it prints 'Sorted Array: ' followed by a for loop for (i = 0; i < n; i++) that prints each element a[i] separated by a space. The output window on the right shows 'Sorted Array: 1 2 3 5 8'.

```
9   for (i = 0; i < n - 1; i++)
10  {
11      for (j = 0; j < n - i - 1; j++)
12      {
13          if (a[j] > a[j + 1])
14          {
15              temp = a[j];
16              a[j] = a[j + 1];
17              a[j + 1] = temp;
18          }
19      }
20  }
21
22  printf("Sorted Array: ");
23
24  for (i = 0; i < n; i++)
25  {
26      printf("%d ", a[i]);
27  }
28
29  return 0;
```

Output: Sorted Array: 1 2 3 5 8

RESULT : Common elements Between Two Arrays has been found sucessfully
